

## **20A**

### **b. Questions**

At this point I still have the same questions as when I first read the section. I'd like some clarification on the fake spheres examples — they seemed really interesting but I am still a little confused on the details. I also am still confused about the geometric interpretation of proposition 4.21.

### **c. Reflections**

I feel about the same as when I first read this section. I'm sure I will have more questions once I've done some sample problems and discussed the section in class.

### **d. Time**

I took roughly 30 minutes to read this section.
