

Process Memo

---

(a) What do you like about your latest updates to results/discussion?

*I was able to finish up the theory section of my thesis which I'm really happy about. I think I have a good scaffold now for the results and should be able to flesh out more detail by the end of the week. I have also been working on a couple of diagrams (flow charts) to explain how the code works (Euler's method and step acceptance/rejection). Once I have these, finished my methods will be really quick to write up. Again i*

(b) What would you like me (the instructor) to look at in particular?

If you could, I it would be nice to do one more look over of the theory section. I have added a table my results where I will put my final simulation parameters but I'm still trying to do a little last minute fitting.

(c) What concerns/questions do you have about your thesis?

I am starting to feel a little pressed for time but I think I am still on track to finish! I have a plan and just need to execute.
