CS 161 Day 5 Notes

John Waczak

4/11/2018

Some usefull math tricks

```cpp
#include <iostream>
#include <string>
#include <cmath>

using std::cout;
using std::endl;
using std::string;
using std::pow;

int main()
{
  int num = 6;
  num++;
  cout <<"num++ does this: "<< num << endl;
  num--;
  cout <<"num-- does this: " << num << endl;
  cout <<"The pow command for 2^3 does this: "<< pow(2,3) << endl;
  return 0;
}
```

num++	does	this:		7			
num–	does	this:		6			
The	pow	command	for	2^3	does	this:	8
